Attorney Docket No. 1832K US

WHAT IS CLAIMED IS:

1. (Currently Amended) A fluid connector apparatus adapted for use with a compression apparatus, the fluid connector apparatus comprising:

5 a pressurized fluid source;

a controller, the controller further comprising
instructions providing a timed sequence of the pressurized
fluid to a compression sleeve attached to a second
connector;

10 a first connector and a second connector, the fluid
connector apparatus further having a first position and a second
position, both positions allow for fluid flow therethrough a
fluid orifice located at the first connector;

 the second connector is releasably attached to the first
15 connector, at a proximal end of the orifice of the first
connector, wherein the fluid orifice further includes a ~~single~~
valve disposed in the fluid orifice;

 in the first position the ~~single~~ valve is in a
substantially open position by the second connector, the
20 pressurized fluid source delivers a pressurized fluid through
the valve ~~for allowing fluid flow from the compression apparatus~~

Attorney Docket No. 1832K US

to the compression sleeve in fluid communication with the fluid orifice; and

in the second position the second connector is detached from the first connector, the single valve advances in a proximal direction ~~to a closed position~~ in the fluid orifice, the pressurized fluid source continues to deliver the fluid through the single valve, when the valve substantially reduces ~~ing~~ but does not close ~~ing~~ the fluid orifice to fluid flow therethrough for approximating the pneumatic behavior of the detached compression sleeve at the second connector.

2. through 6 (Canceled)

7. (Previously Presented) The fluid connector apparatus according to claim 1 wherein said first connector includes a cap portion disposed therein and said valve engages said cap portion for limiting the travel of the valve.

8. (Canceled)

9. (Previously Presented) The fluid connector apparatus according to claim 1 wherein said second connector includes a locking arm extending therefrom such that said locking arm is adapted to releasably retain said first connector with said second connector.

Attorney Docket No. 1832K US

10. (Previously Presented) The fluid connector apparatus according to claim 9 wherein said first connector includes a slot for engaging said locking arm.

11. (Canceled)

5 12. (Previously Presented) The fluid connector apparatus according to claim 1, wherein said second connector includes an engagement portion extending therefrom and said valve is displaced by said engagement portion when said second connector is mated to said first connector.

10 13. through 20. (Canceled)

21. (Previously Presented) The fluid connector apparatus according to claim 1, wherein the valve has a biasing member comprising at least one of the following: a spring, a plastic cantilever spring arm, and a elastometric material forming a
15 gasket.

22. (Previously Presented) The fluid connector apparatus according to claim 21, wherein the valve is biased substantially open in the first position.

20 23. (Previously Presented) The fluid connector apparatus according to claim 1, wherein at least one of the orifice and the valve has a slot therein.

Attorney Docket No. 1832K US

24. (Previously Presented) The fluid connector apparatus according to claim 1, wherein the valve further includes a plunger and a valve seat having at least one slot.

25. (Withdrawn) A method of operating the fluid
5 compression apparatus of claim 1 to approximate the pneumatic behavior of the detached compression sleeve at the second connector comprising:

disconnecting the second connector from the first connector wherein the valve further comprises a slot therethrough at least
10 at one of the orifice and the valve for fluid flow therethrough.
